

## Acknowledgements

We would like to thank the member of our research group – Andrei Afanasev, Gianna Cauzzi, Andrea Diercke, Joao da Silva Santos, Chris Gilly, Ryan Hofmann, Ivan Milic, and Momchil Molnar – for their helpful discussions regarding this project and our earlier work.

This paper makes use of the following ALMA data:

ADS/JAO.ALMA#2016.1.00423.S, ADS/JAO.ALMA#2016.1.00050.S, ADS/JAO.ALMA#2016.1.01129.S, ADS/JAO.ALMA#2016.1.01532.S, ADS/JAO.ALMA#2016.1.00202.S, ADS/JAO.ALMA#2017.1.00653.S, ADS/JAO.ALMA#2016.1.00572.S, ADS/JAO.ALMA#2018.1.01879.S, ADS/JAO.ALMA#2016.1.00788.S.

ALMA is a partnership of ESO (representing its member states), NSF (USA) and NINS (Japan), together with NRC (Canada), MOST and ASIAA (Taiwan), and KASI (Republic of Korea), in co-operation with the Republic of Chile. The Joint ALMA Observatory is operated by ESO, AUI/NRAO and NAOJ. SALSA, SALAT and SoAP are produced and maintained by the SolarALMA project, which has received funding from the European Research Council (ERC) under the European Union’s Horizon 2020 research and innovation programme (grant agreement No. 682462), and by the Research Council of Norway through its Centres of Excellence scheme, project number 262622.

Data in this publication were obtained with the facilities of the National Solar Observatory, which is operated by the Association of Universities for Research in Astronomy, Inc. (AURA), under cooperative agreement with the National Science Foundation.” IBIS has been designed and constructed by the INAF/Osservatorio Astrofisico di Arcetri with contributions from the Università di Firenze, the Università di Roma “Tor Vergata”, and upgraded with further contributions from NSO and Queens University Belfast. HMI data is courtesy of NASA/SDO and the HMI science team. This research has made use of NASA’s Astrophysics Data System.
